

STRUCTURAL DESIGN OF *mortarless* MASONRY to BS 5628:2005

DESIGN MANUAL - Part 1

Warwick Colefax BE(Hons) DipTechEng(Struct) MIEAust CPEng RPEQ

For the purposes of this design manual, the term mortarless masonry refers to concrete block construction in which the concrete blocks are laid without the use of mortar in either the bed joints or the perpends. The term *mortarless* masonry refers specifically to masonry construction utilising the system manufactured under license from Mortarless Pty Ltd, an Australian company that holds the worldwide license for the system. In *mortarless* masonry construction hollow concrete blocks are interconnected by means of plastic connectors that have the following functions:

- they firmly secure blocks to each other end to end,
- they help correctly position the blocks in the overlying courses, and
- they accurately support horizontal and vertical reinforcement in its correct location.

There are quite a number of mortarless masonry systems on the market, however they all vary in the way the blocks interlock and in the way (if any) reinforcement is located and held in position. Not all systems make use of plastic connectors.

Part 1 of the design manual establishes the applicability of using BS 5628-1:2005 & BS 5628-2:2005 for design of *mortarless*, and it provides guidance on all aspects of the design of *mortarless* masonry in accordance with BS 5628:2005. It also summarises the Code provisions used in the generation of the design tables in the subsequent parts of the manual.

Part 2 of the design manual provides comprehensive sets of design tables for the 200 *mortarless* products.

The design tables have been specifically prepared for the *mortarless* masonry system manufactured under license from Mortarless Pty Ltd. The values given in the numerous design tables have been calculated using the design recommendations provided in BS 5628:2005 as outlined in Part 1.

DISCLAIMER:

The *mortaless* design manual has been compiled to assist structural engineers quickly and efficiently prepare designs and details of load-bearing *mortarless* masonry structures and elements. Numerous design tables have been provided and these cover a broad range of typical design applications. While every care has been taken to ensure the information provided is accurate and complete for the design situations and actions covered, the information should only be used by experienced practicing structural engineers, and all engineers should familiarise themselves with the full contents of the applicable Standards to ensure no requirement is overlooked. Mortarless Pty Ltd, its licensees and the author accept no liability whatsoever arising out of the use or misuse of the information provided in this design manual.

Contents:

SECTION 1. BS 5628:2005 – CODE OF PRACTICE FOR THE USE OF MASONRY

- 1.1 Overview of BS 5628:2005
- 1.2 Scope of BS 5628:2005
- 1.3 Design objectives & general recommendations of BS 5628:2005
 - 1.3.1 Limit state design
 - 1.3.2 Stability
 - 1.3.3 Loads & load combinations
 - 1.3.4 Structural properties
 - 1.3.4.1 Characteristic compressive strength f_k
 - 1.3.4.2 Characteristic compressive strength f_k of masonry in bending
 - 1.3.4.3 Characteristic shear strength f_v – transverse shear
 - 1.3.4.4 Characteristic shear strength f_v – in-plane shear
 - 1.3.4.5 Characteristic strength of reinforcing steel f_y
 - 1.3.4.6 Characteristic anchorage bond strength f_b
 - 1.3.4.7 Elastic moduli
 - 1.3.5 Partial safety factors γ_m γ_{mv} γ_{mm} γ_{mb} γ_{ms}

SECTION 2. MORTAR

SECTION 3. REINFORCEMENT

- 3.1 Mechanical properties
- 3.2 Main reinforcement
- 3.3 Secondary reinforcement
- 3.4 Minimum reinforcement
 - 3.4.1 Minimum main reinforcement
 - 3.4.2 Minimum secondary reinforcement
- 3.5 Wide-spaced reinforcement
- 3.6 Close-spaced reinforcement
- 3.7 Laps in reinforcement
- 3.8 Anchorage of 90° bends

SECTION 4. COVER TO REINFORCEMENT

- 4.1 Cover requirements for durability
- 4.2 Cover requirements for fire resistance

SECTION 5. CORE FILL GROUT

SECTION 6. SLENDERNESS RATIO

- 6.1 Unreinforced mortarless to BS 5628-1:2005
- 6.2 Reinforced mortarless to BS 5628-2:2005

SECTION 7. DESIGN FOR COMPRESSION

SECTION 8. DESIGN FOR BENDING

- 8.1 Unreinforced members – vertical bending
- 8.2 Reinforced walls subject to bending transverse to the plane of the wall
- 8.3 Reinforced walls subject to bending in the plane of the wall

SECTION 9. DESIGN FOR COMBINED COMPRESSION AND BENDING

- 9.1 Design of short columns
- 9.2 Design of slender columns
- 9.3 Design of short walls
- 9.4 Design of slender walls

SECTION 10. DESIGN FOR TENSION

SECTION 11. DESIGN FOR SHEAR

- 11.1 Shear resistance of reinforced masonry in bending
- 11.2 Shear resistance of reinforced masonry subject to in-plane shear
- 11.3 Minimum shear reinforcement in *mortarless* masonry beams
